Full-Stack Developer | DSA & Problem Solving | Aspiring Software Engineer

Education

High School

- Percentage: 91.3%

April 2021 – March 2022

Intermediate

- Percentage: 86.4%

April 2023 – March 2024

Bachelor of Technology in Computer Science & Engineering (GLA University, Mathura)

- CGPA: 7.84

August 2024 – May 2028

Technical and Professional Skills

- **Programming Languages:** Java, JavaScript, Python, C++, C.
- **Frontend Technologies:** React.js, Tailwind CSS, HTML/CSS, Responsive Web Design, UI/UX Design, DOM.
- **Backend Technologies:** Node.js, Next.js, Express.js, MongoDB, NoSQL, SQL, PostgreSQL, Supabase, Firebase.
- **Tools:** GitHub, MCP Servers, Postman, Vercel, Railway, Render (Cloud Deployment).
- **Concepts:** Data Structures and Algorithms (DSA), Software Engineering Principles, Object Oriented Programming (OOP), Database Management Systems (DBMS), Full-Stack Development, Operating Systems.
- **Professional and Soft Skills:** Teamwork, Leadership (Associate, CodeBusters), Team Collaboration.

Training Experience

APGC (Astroparticle Physics, Gravitation and Cosmology) Conference Website

Mar 2025 - June 2025

- Built and deployed a fully responsive conference platform using React.js and Tailwind CSS
- Designed and optimized user interface for event schedules, registrations, and information access
- Awarded **Letter of Appreciation** by GLA University, Mathura

Walmart Advanced Software Engineering Job Simulation (Forage)

Feb 2026 – Feb 2026

- Simulated real-world software engineering workflows, solving practical development and optimization problems
- Utilized advanced data structures (e.g., trees, graphs, hash maps) to improve algorithm efficiency
- Focused on writing optimized and maintainable code aligned with industry standards

Projects

Sumora AI (Mern Stack, Deepgram, Langchain, Gemini API, Groq API, Brevo, JWT, Web Sockets) [\[Live\]](#) [\[Github\]](#)

- **Architected a Full-Stack AI Interview Platform:** Developed robust MERN-stack application that simulates realistic coding and behavioral interviews using Large Language Models to help users prepare for technical roles.
- Implemented real-time voice capabilities using Deepgram APIs for low-latency Speech-to-Text (STT) and Text-to-Speech (TTS), powering seamless, conversational voice-based interactions with the AI agent.
- Engineered robust backend processing pipelines to securely parse uploaded PDF resumes (pdf-parse) and dynamically inject the user's professional context into AI prompt flows for highly personalized question generation.

Bharat Netra | Law Enforcement Platform (Mern Stack, External APIs, Secure Auth)

[\[Live\]](#) [\[Github\]](#)

- Developed a full-stack platform to enhance investigation workflows and data management for law enforcement agencies
- Integrated 10+ investigative tools including IP lookup, domain lookup, and external intelligence APIs
- Implemented secure data handling and API integrations for real-time information retrieval

Achievements

- Solved 700+ DSA problems on LeetCode, GeeksforGeeks, and other coding platforms, strengthening problem-solving skills
- Achieved a maximum rating of 1259 on Codeforces
- Actively contributed as an Associate Member of Codebusters Club, participating in coding events and collaborative learning
- Built 10+ full-stack applications using MERN stack and Next.js, focusing on scalable and efficient solutions

Co-Curricular Activities

Associate CodeBusters Club, GLAUniversity, Mathura
